

### **Business readiness status for upcoming low carbon energy era**

**Robert Judd / Technical Director Hydrogen & Gas**

**| Det Norske Veritas group Asia Pacific**

DNV will present the results from its Energy Transition Outlook which models the world's energy systems and considers options to accelerate global decarbonisation.

Climate solutions to reduce carbon emissions and support a clean energy transition are available today. These include harnessing hydrogen, a critical carbon-free fuel that holds the highest potential to tackle hard to abate emissions and CCUS which offers an opportunity to re-use, recycle and remove CO2 emissions.
